"Greening" the City? Artistic Re-Visions of Sustainability in Bogotá

Karen E. Till | Virginia Tech

Abstract:

In many countries, urban renewal, as tied to the rhetoric of sustainability, has led to proposals to “green” the city. When tied to a development logic, the complexity of urban places become reduced to two-dimensional mappings of absolute space: lots, peoples, and landscapes are classified as blighted and threatening to the body politic. In this article, I focus on creative visual practices that challenge such a model of urbanization and provide alternative spatial imaginaries of the city. I examine two artistic interventions in Bogotá: Prometheus, a collaboration with former residents of El Cartucho and the artistic collaborative Mapa Teatro from 2001–2003; and Auras Anónimas (Anonymous Auras) by Beatriz González, unveiled in 2009. Both projects animate the messy complexities of place in a city marked by violence, where any historical narrative and hegemonic vision of urbanism is subject to question and doubt.

In Bogotá, as in other cities in the world, political candidates have run on “green” campaigns. Winning an election under such a banner in 1997, Bogotá’s mayor Enrique Peñalosa Londoño of the Liberal Party has recently received praise for creating a more “sustainable” city; indeed, he was invited to the World Urban Forum in 2006 to give the plenary lecture based upon his reforms.¹ Peñalosa initiated five mega-projects during his three years in office

(1998-2001)—the bank of lands; a parks system, including a bike paths network; a system of libraries; the Transmilenio mass transit system; and road construction, maintenance, and renovation (Avenida 15 and Autopista Norte) ([Absolute Astronomy](#)). Not all of these were completed, but he was able to push through such ambitious initiatives in part because he received a city in good fiscal condition (due to mayor Jaime Castro, who reformed the city's financial structures), a more active citizenry (due to his predecessor Antanas Mockus who pursued a *Cultura Ciudadana* or Citizen Culture program), and a relatively independent District Council. He also built upon existing traditions to encourage a sense of safety in public spaces, in particular *Domingo Ciclovía* (Cycling Sunday), launched by Augusto Ramirez in 1982, to close the city's main arteries to vehicular traffic and encourage bicycle use. Peñalosa also broke the mafia's hold on the city's bus transportation system and challenged the city's reliance on Japanese transportation companies who recommended building more freeways rather than creating alternative public transport options.

Figure 1: Public Park of the Third Millenium

Bogotá now has the largest bike path system in all of Latin America and one of the most successful public transportation systems. In 2007, PBS's *Design e2* series ran a special on Peñalosa's vision for creating a city for people, not cars. In the video's introduction (narrated by Brad Pitt), Peñalosa was praised: "In just ten years, Bogotá's murder rate fell 70%, from one of the highest in the world to less than that of Washington D.C. It can be argued that this turnaround was due in part to the vision of Enrique Peñalosa and his belief that sustainable urban design can be the foundation for social justice."² Despite this success, there remains some irony in his being labeled the "happiness mayor" and identified with social justice ([Peñalosa and Ives 2004](#)). Peñalosa's sustainability reforms not only included significant transportation innovations, but also the removal of street vendors and residents from downtown sidewalks and neighborhoods. For example, El Cartucho, a neighborhood in the historic Santa Inés district known to be one of the most dangerous places in the city, was razed for what became (a rather sterile and still unsafe) Public Park of the Third Millennium by 2005 (Figure 1). Peñalosa called the neighborhood "a symbol of chaos and of government impotence" and part of his mayoral campaign included the promise to "reclaim El Cartucho for the public" (Mance 2007). Yet thousands were displaced,

the livelihoods of many residents were destroyed, and numerous historic buildings were torn down. Another example was the partial razing of the city's central public cemetery for the poor (Figure 2); the intention was to remove the city's unnamed dead interred in mass crypts so that the virile bodies of soccer players could have a new sports field. Rezoning a "blighted" residential neighborhood and a cemetery for use as a central park or leisure space meant displacing not only the city's and nation's poor and unwanted peoples, but also the memory of the presence.

Figure 2: The former cemetery for the city's underclass

These are sadly familiar stories. The rhetoric of urban renewal, revitalization, gentrification, and most recently sustainability has gained a renewed status in many cities through the so-called "new public management" planning (Boston 1996; Barzeley 2001), an approach that assumes problematic analogies between places and commodities, and between cities and entrepreneurial firms. Such a development logic includes a particular spatial imaginary of the city, seeing landscapes as spaces of potential profit, and evaluating centrally located sites as either "good" or "bad."³ Places with rich and complex histories become viewed as parcels of property that can be bought and sold, and zoned and rezoned. When located on a planner's land-use map, places are represented as two-dimensional absolute spaces that can be zoned; uses (and peoples, things, spatial relations, buildings) can be filled in or cleared out.⁴ On the always future-oriented land-use map of the city, lots classified as blighted or marginal are "seen" as temporal aberrances, as underused, or redundant. Within this scopic regime, the people and material landscapes associated with such areas are deemed as threatening to the body politic and the public, and must thus be purged from the city.

When eminent domain policies in the name of the public interest displace peoples against their will without compensation and classify lived places in the city only as parcels of property, the question of the "right to the city" must be raised (after Lefebvre 1996). If urban planners and politicians are to take seriously their claims of social and environmental sustainability in ways that include social justice, moreover, the ways in which urban space is visualized and represented must change. In this article, I focus on the ways that creative visual practices might

challenge such a development model of urbanization and provide residents, urban theorists, and city-planning professionals alternative spatial imaginaries of the city. The aesthetic forms, social processes, and relations that emerge through urban artistic practices include new narratives, memories, dreams, and objects that might be shared with others, even if only for a limited range of time (Dorrian and Rose 2003; Kester 2004; Lacy 1995). These alternative visualizations of the city, and the processes that go into their making, throw contemporary development maps into disarray and remind us that places are lived, performed, and inhabited, and never merely property (Till 2008). Such spaces of encounter—with past, present and future lives and natures—invite residents and visitors to explore the lingering and possible pathways of remnant landscapes, material objects, and forms of belonging. As I argue elsewhere, artistic memory-work based upon unfolding and open-ended pathways may also offer ways of inhabiting the city tied to a place-based ethics of care (Till in press).

In this article, I examine two artistic interventions that in some way challenge Peñalosa's vision for a sustainable city: *Prometheus I and II*, a collaboration with former residents of El Cartucho and the artistic collective Mapa Teatro⁵ from 2001-2003; and *Auras Anónimas (Anonymous Auras)* by Beatriz González, unveiled in Bogotá, Colombia in 2009. Both projects animate the messy complexities of urban *places* as lived environments of meaning, memory, and matter. Through what Lisa Saltzman (2006) describes as post-indexical forms, the creative practices of these artists explore the role that the past plays in a city marked by violence, where any historical narrative and hegemonic vision of urbanism is subject to question and doubt. Through very different creative practices, the artists invite residents to perform and explore their attachments to, and experiences and memories of, their homes, their city, and their nation through social rituals in their neighborhoods or central public spaces. The art of and engagement with places as living environments work through body memory in ways that might enable alternative, more inclusive spatial imaginaries of the city and the future. Below I explore how, in making the spatial-temporal movements of memory tangible through the very places and bodies designated as marginal by city authorities, *Prometheus* and *Auras Anónimas* encouraged residents, guests, and city officials to re-vision the city in ways that might stimulate a process of critical self-reflection about difficult social issues.

Cleaning up neighborhoods? Mapa Teatro's "experimental communities"

In Bogotá, the Santa Inés neighborhood known as El Cartucho became the target of urban renewal policies beginning in the 1990s. Located near the main government buildings downtown, it was one of the most historic neighborhoods in the city. Yet due to the interrelated processes of urbanization and suburbanization, economic restructuring, and migration, the former colonial buildings in this centrally located area became run down. Elite residents began moving to other parts of the city by the 1960s and 1970s. When the central bus depot was

EMISFÉRICA

located nearby, Santa Inés became the port of entry for many families and individuals who left the poverty and violence in the countryside and sought better opportunities for their children in the city. With high rates of homelessness and unemployment, informal economies emerged. Soon the entry of the drug cartels and strongmen meant that the neighborhood had one of the highest rates of homicide and insecurity in the city (and hence the nation). As Henry Mance (2007) observed,

You could buy drugs anywhere in Bogotá, but only in El Cartucho could you consume them so hassle-free. Thousands of homeless people, prostitutes and criminals came to the area [...] A gulf grew between the area and the rest of Bogota. It developed its own rules: residents were not to rob inside El Cartucho, not to be grasses, and to speak only when necessary [...] El Cartucho even had a ‘commander,’ a former criminal known as Comanche, who would resolve disputes between residents and with the world outside [...] In the 1990s, it had begun to attract not just drug users and prostitutes—but also journalists, anthropologists, social workers, and politicians. As its legend grew, so did public outrage.

Under Peñalosa’s term, reclaiming the neighborhood for the public meant rezoning the area, displacing the people that lived there (mostly without compensation), and razing the neighborhood to make way for a central park. During this period, many individuals that lived informally in the neighborhood working as trash collectors, recyclers, and street vendors became homeless. Some were temporarily housed in hotels to be processed and given identity cards before being let back on the street without housing. In a still later phase other residents were relocated to the nearby slaughterhouse.

In 2000, a new (returning) mayor, Antanas Mockus, inherited the park project. Plans were already well-advanced to raze the entire twenty hectares of Santa Inés, which began in 2003. In response to the political backlash that occurred with the projected removal of most of Santa Inés, as well as building upon his previous agenda of creating civic responsibility, the Mockus administration hired the artistic group Mapa Teatro as part of a larger urban community development and public art working group to develop projects in collaboration with local neighborhoods.⁶ The working group included historians, anthropologists, social workers, students, and artists. They developed “Project *C’úndua*: A pact for life,”⁷ which ran from 2001–2003, with three projects that ran at multiple locales throughout the city: 1) *C’úndua*: anthropological and artistic work with residents of an informal settlement on the outskirts of the city, Usaquén, that included ethnographies, school projects, and simultaneous visual installations between Usaquén and a downtown square (2001); 2) *Prometheus*: historical research and artistic work coordinated by Mapa Teatro in collaboration with anthropologists, students, and residents of Santa Inés, resulting in installations and site-specific performances along the historical route Avenida Jimenez and in El Cartucho (2002-2003); and 3) *Corridos (Run-throughs)*: “video-sonic install-actions,” or the use of theater, performance

EMISFÉRICA

art, installation art, and activism resulting from the collaborations of Mapa Teatro and former residents of El Cartucho, in downtown Bogotá (2003). These projects were sponsored by the City of Bogotá's Mayor's Office and the United Nations Development Programme (UNDP).⁸

The projects in different ways communicated residents' stories and experiences of loss through performances of place, mythic creations, and expressions of personal and social memory. Mapa Teatro helped coordinate intergenerational memory books (working with K-12 schools); video installations; street-specific photographic memory projects (later installed in bus terminals); site-specific theatrical performances; and related exhibitions and publications. Through their artistic interventions, peoples, spaces, objects, and times from what was considered marginalized and centralized locations were reconfigured to question historical narratives of progress. Citizens living in informal settlements located at both the outskirts and central parts of the city, colloquially known as "disposables," were brought into contact with citizens living in mainstream society through "encounter spaces." Typical of Mapa Teatro's artistic mappings, places and times were juxtaposed through very different embodied journeys that encouraged acts of personal and collective discovery.

For what became the *Prometheus* project, city authorities initially suggested creating some sort of tangible marker in the landscape in Santa Inés, a permanent memorial that would function as a testimony to the life experiences of those who once inhabited this part of the city. But the artistic team Mapa Teatro did not want a pre-determined project to set the parameters for their creative work with the residents. Instead they co-curated and developed "social laboratories of the imagination" with former and soon to be displaced residents of El Cartucho. After talking to residents about their experiences and getting permission to video-tape personal stories at home or in the locations of their former homes, Mapa created relations of trust with a small group of residents. They invited these individuals to work on an artistic project that would move beyond the telling of their personal stories. After preliminary workshops that included bodywork, they invited residents to read and discuss Heiner Müller's *Prometheus myth*. They encouraged residents to perform their personal stories through their interpretations of this myth. They had no idea what to expect.

In December 2002, fifteen residents from El Cartucho performed an evening rendition of *Prometheus, Act One*. All residents of the city, including Mayor Mockus, were invited to attend. The city center and the razed lots of the "old" Santa Inés neighborhood functioned as a backdrop and stage. Two large video screens (about three stories high) were erected, upon which "archival" stories of the residents that had been previously recorded by the artistic collaborative were projected; the voices of interviewed residents was the "soundtrack" for the performance. Residents brought their furniture and belongings from one room in their former homes (or the artists helped them furnish a room that they wished they might have) to create a stage: there was a bathroom, a bedroom, a dining room.

EMISFÉRICA

As residents performed their interpretation of Prometheus in formal attire, they did not speak but enacted the myth/their story, such as by sequentially lighting matches while sitting atop chairs, playing cards at a dining room table, walking around and dancing on the fantasy of having a bed, or performing magic tricks in front of mirrors. Throughout their performances, the projected images ran and spoke behind their embodied enactments atop their former homes. *Prometheus*, to quote Mapa Teatro, became “a poetic reconstruction of once inhabited places” ([Mapa Teatro](#)).

At times, the “actors” mimicked the recorded images of themselves being projected/performed on the large screens. In this way, audiences became witnesses to the spectacle of themselves witnessing stories of loss (Blocker 2009; Ranciére 2009; Taylor 1997). What places and stories were “real” and what were imagined in this performance? What fantasies and memories did the actors and audiences bring to these city spaces in transition? What did the actors, as residents performing in their reconstructed homes and former locations of their old neighborhood, remember as their story unfolded behind, in front of, and around them? To include the audience into the performance, *Prometheus* concluded with a grand ball, which became a celebration of this place and an invitation to reflect upon how this place has been perceived. The audience was invited to come to the stage and join the “actors.” In this way the many spaces and stages between the “actors” and “audience,” recorded images and lived experiences, memory and imagination were blurred, offering the possibilities of new stories, new imaginaries, alternative futures. A year later, in the same place and time, *Prometheus, Act Two*, was performed, offering a new record of the lives of the people involved in the previous year’s performances in the last moments of the neighborhood’s demolition.

According to Daniel Vargas, the Executive Director of *C’úndua*, the creation of experimental communities was a more fitting form of memory-work than a permanent memorial in El Cartucho. He noted that the city’s initial idea of building a memorial designated “a population [as] without a memory, without any intention to remember, to assimilate,” and asked outsiders “to leave a testimony and pay homage to its most painful and happiest life experiences.” Such a gesture, he argued, is indicative “of a society that has problems *recognizing itself*.”⁹ For Mapa, the presentation of the life histories and experiences of these residents through *Prometheus* was akin to “a paper record of the disappearance of a neighborhood through the building of a park in the city center.”¹⁰ But of course much more transpired. New spaces of imagination were explored by the residents and artists through the performance. Residents worked together in different settings and capacities in unanticipated ways to remember and represent their attachments to their homes. El Cartucho, always a mythic and lived place, became a threshold through which residents could access voices, inheritances, and resources that might provide a language of belonging, even as people were structurally excluded from the city. Residents were able to connect with the materialities and psychic qualities of the places they once inhabited that

still remained within them. The performance became what anthropologists Arthur and Joan Kleinman (1994) call an enacted assemblage, where the “interconnected cognitive, affective, and transpersonal processes” of body-social memory come together (719). Because the demolition of El Cartucho exceeded contemporary narratives of urbanization and public memory, the performances of place by former residents had the potential to transform memories of violence to shared stories of relevance through forms of collective witnessing rather than spectatorship, and through the co-construction of experimental communities that offered the possibility of critical self-reflection.

Greening Bogotá’s landscapes of the dead?

Figure 3: Spaces of the dead in Bogotá

Historically there have been two cemeteries in Bogotá: one for wealthier people (Figure 3), and, on the other side of the road, one for the underclasses (Figure 2). In the cemetery for the disadvantaged, bones of individuals whose families could not afford to bury them were interred for four years, after which they were taken away to a mass grave in the southern part of the city. No one, it seems, remembered the deaths of those interred there. These may have been individuals fleeing the violence of the countryside in hopes of a better future in the city. These may have been residents who suffered from the inequities, racism, and political and cartel violence that became concentrated in Bogotá in the 1970s, only to become worse during the “lost decade” of the 1980s.

Figure 4: Auras Anónimas

Under Peñalosa, the cemetery for the poor was rezoned as park space, with the intention that this space for the dead could be transformed into a soccer field. Understanding this decision as yet another political act of violence, in 2000 artist Doris Salcedo proposed a plan to the new municipal authorities to establish the cemetery and its remaining structures for site-specific artistic pieces in order to prevent the further destruction of mass crypts.¹¹ Her proposal successfully prevented the complete transformation of the cemetery into a leisure space. By the time the proposal was accepted, two structures (*columbarios*) had already been razed; the remaining crypt structures were placed under temporary protection through national heritage legislation under mayor Antanas Mockus in 2003 (Figure 4). (The future status of the buildings remains unclear.) At least for now, a space of memory exists for artists and residents to explore contemporary issues through the space-times of these urban remnants.¹²

Figure 5: Auras Anónimas

The first site-specific artwork was unveiled in August 2009. In, through, and beyond the remaining four buildings, housing over 2200 collective crypts each, artist Beatriz González created *Auras Anónimas* to remind citizens of the sanctity of each individual's life (Figure 5). González hand-painted 8,957 stencils of images of victims of violence in the spaces where anonymous human remains of the urban underclasses once laid (Figure 6). The artist created these stencils based upon eight images of brutality taken by photojournalists and printed in the popular media. As González mentioned, these media images are ephemeral; they are printed one day and are gone the next. No citizen has been moved to action through these images of torture and bloodshed. She wanted, however, to treat every space, every niche, in an individualized way, even though there were no names associated with these changing vaults for the unwanted dead of the city.

EMISFÉRICA

Figure 6: Auras Anónimas

González's work, in contrast to cartographic anxiety of city officials and planners, creates and works through what I call the "interim spaces" of the city (Till 2010). At seemingly empty or marginal settings, artistic memory-work practices engage the city and our psyche according to the ways they are haunted by what phenomenologist Edward Casey (1977) describes as the unresolved remainders of memory. Mnemonic remainders exist beyond consciousness; for Casey, they remain alive through body memory, place memory, and social ritual. Through *Auras Anónimas*, the symbolic and material movements across and through space and time blur the boundaries between such insides and outsides of memory.

As Salcedo reminded us, we remember images when someone dies, within the space of mourning personally. But it is the circulating, postmemorial (Hirsch 1997), and posttraumatic images that circulate and are well-known for Colombians. When they see these images, they remember that they know these facts, but respond with indifference. These pictures of individual people have become anonymous. As Salcedo noted, for *Auras Anónimas*, the repetition of these photographic images creates a phantasmagoria, that is, the traumatic character of death that is considered irrelevant by most Colombians. If memory traces are always "re-transcribed" and "re-discovered" with evolving circumstances through time (belatedness), as Casey argues, through these images, the past is continually reshaped in the present, but not so much in terms of deferred events but in the sense of the possibilities of memory. Rather than treat the past, present, and future as separate—"that happened in the past, over there in that time"—unresolved remainders offer a form of remembering that is a process of ongoing remanence. Casey writes that the unresolved remainders of memory "do not consist of depositions laid down—as is assumed in theories preoccupied with leaving marks and traces in an unchanging material base—but in pathways that branch off ever more diversely into a multiple futurity" (277 my emphasis). There are always residuals and excesses. At some moments in time and in some places, we might remember those residuals and move differently through pasts to futures to presents.

Casey suggests that in body memory, place memory, and social rituals these residuals of memory find refuge. It is precisely through these social relations, embodied performances, and places that *Auras Anónimas* works as a project of critical public memory. González wanted to reconstitute a sacred element, to return the ritual of mourning individual deaths, to this defaced place. After the transgression of a violent death, the artist wanted to relocate individual acts of bereavement back to the social rituals of a public space, to recuperate the memory of another. For González, individualizing an image through repetition brings a truth dimension, or aura, to each crypt; it activates the space for a collective memory, of witnessing and narrating in an aesthetic form of what has happened. The art shows internal violence and expresses the perverse logic of the Colombian experiences and legacies of death. Do we see peasants or soldiers carrying a body? Who are the victims? Who are the perpetrators? People come alive again in these images; as we view, as we witness, the art changes the pathways of memory.

Salcedo noted that the cemetery has now become a place of memory for the next generation of artists and citizens. By creating such interim spaces to explore the pathways of these unresolved remainders of memory, artistic projects create cartographies that mobilize critical spatial and historical imaginaries and call into question the inevitability of the present. Yet at the same time, visitors are asked to recognize the individuality inscribed in these public structures of death and mourning, an act that may awaken them from the dream-like state of spectatorship, of consuming images, rather than of remembering past violences.

Concluding Comments

Figure 7: Public Park of the Third Millennium

The planning scopic regime premised upon a process of emptying out and reoccupying urban places includes a temporal as well as spatial sequence: places are viewed as absolute spaces and parcels of property; unwanted matter is removed; centrally located and undesirable citizens, memories, and places are made invisible; and the empty spaces thereby created can be filled in with new uses and more desirable bodies. Once places become emptied out spaces, experts (planners, architects, urban designers) are called in to make “good” places. As part of this logic, the implicit social message is that “bad” people are responsible for the bad places they

EMISFÉRICA

live in. Yet as Rolf Abderhalden Cortes of Mapa Teatro described, “In 2006, the Parque Tercer Milenio was awarded the prize for the best public works project at the Bienale de Arquitectura in Colombia. It was a prize awarded, in truth, to a cemetery” (personal communication) (Figure 7).

Landscapes, stories, empty lots, bodies, and other matter classified by city officials as marginal and in need of removal don't just go away when buildings are torn down. Their presences linger and continue to haunt other spatial-temporal registers of the lived city (Till 2005). Mapa Teatro's understanding of “laboratories of social imaginary” offered space-time configurations and enacted assemblages through which residents performed, listened, witnessed, and imagined geographies of loss. By creating places of performance as an act of memory-work, audiences engaged in intersubjective processes that may alter taken-for-granted understandings of citizenship and belonging in postcolonial cities.

Through Beatriz González's *Auras Anónimas*, residents are invited to re-visit and re-explore public sacred spaces through embodied rituals of mourning. Moving through the unnamed crypts to examine the images of the anonymous victims of violence demands a reflective process: individuals are asked to remember forgotten relatives, family members, neighbors, or fellow citizens. In this way, violence becomes personalized and the auras of those who have gone before may speak of past injustices but also alternative futures.

As the artistic projects of Mapa Teatro and Beatriz González remind, the city, as an inhabited and haunted place, offers possibilities for residents and guests to envision and remember past, present, and future. Artistic encounters offer creative spaces to experiment with new social arrangements; we are invited to think through and experience how, when, and where urban places, stories, and residues are mapped or ignored. Residents and visitors may in this way consider what living with loss, trauma, pain, and the injustices resulting from past national and urban violences means, and how they, as citizens and human beings might create a more socially just society. Such artistic re-visionings of the city can in this way enable all residents' claims to their “right to the city” (after Lefebvre 1996).

Karen Till is Associate Professor in the School of Public and International Affairs at Virginia Tech University. Her geo-ethnographic research explores the interrelationships between place-making, personal and social memory, public art and cultural politics in contemporary cities and societies in transition. Her publications include: *The New Berlin: Memory, Politics, Place* (University of Minnesota Press, 2005); the co-edited volumes *Textures of Place: Rethinking Humanist Geographies*, (UMN Press, 2001) and *Walls, Borders, and Boundaries: Strategies of Surveillance and Survival* (Berghahn Press, in press); and numerous book chapters and articles, including in *Memory Studies*, *History Workshop Journal*, *Social and Cultural Geography*, *Urban Geography*, *Environment and Planning D: Society and Space*, and
